

# **Solar container battery has the longest life**

## Overview

---

Short Answer: Lithium-ion batteries, particularly lithium iron phosphate (LFP) variants, offer the longest lifespan (10–15 years) due to superior cycle life (6,000+ cycles) and depth of discharge tolerance. How long do solar batteries last?

\*Unlimited cycles warranty may not apply if the battery is charged using grid electricity. A few things that stand out: To recap, based on the manufacturer's warranties (which tend to be conservative) you can count on today's lithium-ion solar batteries to last at least 10 years – and perhaps up to 15.

What is the longest lasting battery?

Lithium iron phosphate (LFP) has emerged as the longest-lasting battery type on the market, as indicated by 12 and even 15-year warranties (as opposed to the standard 10 years). Some of the longest-lasting LFP batteries are listed in the table below.

How long do batteries last?

Chemistry type significantly impacts battery performance and longevity. Lithium-ion batteries typically last between 10 to 15 years, making them popular for residential use. Lead-acid batteries last around 3 to 5 years, though they're cheaper upfront. Saltwater batteries, an eco-friendly option, usually last about 10 years.

How long does a lithium ion battery last?

The lithium-ion batteries that dominate today's residential energy storage market have a usable life (70% capacity or more) of 10-15 years, which is roughly double the lifespan of the lead-acid batteries used in the past. However, the lifespan of a lithium-ion battery also depends on its chemistry and how you use it.
