

Solar container communication station inverter grid-connected energy storage ESS residential roof

Overview

What is energy storage system (ESS)?

33 1. ESS introduction & features What is ESS?

An Energy Storage System (ESS) is a specific type of power system that integrates a power grid connection with a Victron Inverter/Charger, GX device and battery system. It stores solar energy in your battery during the day for use later on when the sun stops shining.

What is a hybrid solar inverter & lithium battery storage system?

Seamlessly combining a hybrid solar inverter and lithium battery storage, it provides a reliable, scalable, and cost-effective way to harness the power of the sun. With its modular design, this stackable energy storage system is perfect for scalable applications, providing a flexible, efficient, and reliable energy management solution.

How many inverters/chargers do I need in my ESS system?

There must be at least one inverter/charger (MultiPlus/Quattro) and one GX device such as the Cerbo GX or Ekrano GX in the system. Other components can be added when needed; see the ESS system design chapter.

Do ESS inverters need a grid meter?

All loads and (optional) grid-tie inverters must be installed on the AC out in a system without a Victron grid meter. See earlier in the manual for more information. ESS design and installation manual Page 9 Configuration More information Redflow ZCell Chapter 6.2. 4.3.3. Inverter AC output in use
