# Solar container lithium battery pack life

## Overview

How long do solar batteries last?

The life expectancy of a solar battery depends on several factors—what kind of battery you have, how you use it, where it's stored, and how well it's maintained. While lead-acid batteries may only last a few years, lithium options can easily reach 10 to 15 years or more with proper care.

How long does a lithium battery last?

The storage capacity of lithium (LFP) battery systems is typically measured in kWh (Kilowatt hours), while the most common metric used to determine battery lifespan is the number of charge cycles until a certain amount of energy is lost. This generally ranges from 3000 to 5000 cycles over a battery life of 10 to 15 years.

What type of battery is used in a home solar system?

Most home solar battery systems sold today use lithium iron phosphate or LFP cells due to the longer lifespan and very low risk of thermal runaway (fire). Other lithium cell chemistries are available, such as NCA and NMC, which were popular several years ago and are used in some electric vehicles but are rarely used for home storage batteries.

How long does a LiFePO<sub>4</sub> battery last?

While not as long-lasting as LiFePO<sub>4</sub>, they still typically deliver around 10 years of service with proper care. Saltwater batteries: These are a newer, environmentally friendly option. They use saltwater electrolytes instead of heavy metals and offer a similar lifespan to lithium options—often around 10 to 15 years.
