Solar energy storage tank

Overview

What is a large solar tank?

These large solar tanks allow for longer term storage, or for high demand applications, such as space heating systems, or solar absorption chillers systems. These solar tanks are available in a large variety of sizes, ranging from 175 gallon range to sizes up to 1,040 gallons.

What is a large volume solar heat exchange tank?

The large volume solar heat exchange tanks are designed for larger solar thermal, solar heating, and solar air conditioning projects. These large solar tanks allow for longer term storage, or for high demand applications, such as space heating systems, or solar absorption chillers systems.

What types of solar storage tanks are available?

These solar tanks are available for hot water storage, hot water heating systems, commercial, and industrial applications. These solar storage tanks are available in pressurized, non-pressurized (atmospheric), and in a variety of capacities and sizes. For a full, complete listing of all storage tank sizes and specifications, please contact us.

What are the different types of solar energy storage systems?

These include the two-tank direct system, two-tank indirect system, and single-tank thermocline system. Solar thermal energy in this system is stored in the same fluid used to collect it. The fluid is stored in two tanks—one at high temperature and the other at low temperature.
