

Solar glass warping standard

Overview

How curved glass is used for concentrating solar power photovoltaic (PV)?

The glass must meet the rigid specifications needed by solar products perform as specified. Glasstech provides precisely bent or curved glass equipment solutions for concentrating solar power photovoltaic (PV) market. CPV electricity production. In most cases, the glass substrate is low-iron and the bent product is silvered or coated by the.

What happens if a solar glass substrate is defective?

As in all other glass manufacturing processes, solar glass substrates are subject to defects during production. Depending on the defect type and intensity, the impact of these defects can range from a reduced transmission to a considerable negative influence on the mechanical glass characteristics.

Why is patterned glass used in crystalline solar modules?

In the production of crystalline solar modules patterned glass substrates are used in lieu of bare glass. Patterned glass increases the amount of incoming sunlight. Common optical inspection systems for quality assurance and process control are mostly designed for unstructured glass.

What is a solar glass heat-treating system?

Solar glass heat-treating systems designed with our collective future in mind. Most solar technologies use specialized glass substrates in some way. The glass must meet the rigid specifications needed by solar products perform as specified. Glasstech provides precisely bent or curved glass equipment solutions for concentrating solar power
