## Overview

---

What is a grid connected solar inverter?

This type of inverter is suitable for remote areas with unstable power supply or no access to the power grid. A grid-connected solar inverter is a device that converts the direct current output by solar panels into alternating current and directly supplies it to the power grid.

What is an off-grid inverter?

Though fundamentally an off-grid inverter, this versatile model features grid input support—allowing it to draw power from the grid when solar and battery resources are insufficient. Commonly known as an off-grid hybrid inverter, it combines solar + battery + optional grid power, ensuring uninterrupted energy supply.

What is an on-grid solar inverter?

1. On-Grid Solar Inverter An on-grid solar inverter connects directly to the utility grid. It synchronizes the solar system with grid electricity and exports excess energy. On-grid systems are cost-effective. They reduce electricity bills and enable net metering, where users get credited for the energy they supply to the grid.

What is a hybrid solar inverter?

A hybrid solar inverter combines the features of on-grid and off-grid systems. It connects to the grid while also managing battery storage. Hybrid systems offer flexibility. They ensure backup power during outages and support net metering when the grid is available. Users can optimize energy use by storing excess energy or selling it to the grid.
