

Solar panel specifications and weight

Overview

How much do solar panels weigh?

If you're planning a rooftop mounted solar system, it's critical that you understand how much your solar panels weigh, so that you can determine if your roof can support the system. As with the size, the weight of a solar panel can vary by manufacturer. Typically, 60-cell residential solar panels weigh around 40 pounds a piece.

How much weight can a solar panel support?

Solar panel weight is a critical factor for roof structural integrity: Most residential roofs can support 20 pounds per square foot, making solar panels well within safe limits. However, older homes or those with structural concerns should have a professional assessment. Panel thickness typically ranges from 1.4 to 2.0 inches, affecting:
