Overview

What are solar panels?

Solar panels is a broad term that refers to any panel designed to capture and utilize the energy from the sun. Solar panels can be divided into two main categories: photovoltaic (PV) panels and solar thermal panels. Photovoltaic Panels: Converting Sunlight into Electricity.

What are the different types of solar panels?

Discover the six main types of solar panel, including thin-film, perovskite, and the best type for your home: monocrystalline. What kind of home do you live in?

When you're considering whether to get solar panels, it's a good idea to look into all the different types, to ensure you choose the best system for your home.

What is a photovoltaic solar panel?

Photovoltaic panels are designed for the production of electricity. This type of panel is made up of small solar cells that convert the Sun 's radiation into electrical energy thanks to the photovoltaic effect. This type of solar panel is made of semiconductor materials that are usually derived from silicon.

Can a flat PV system fit more solar panels?

US-based energy technology developer, Erthos, is a clear example of a company investing heavily in flat PV panels. They have obtained a patent for an 'Earth Mount Solar PV system' which the company says can fit more panels into a space than conventional utility-scale plants. So are these companies on to something interesting?
