Can 12V solar panels charge a 24v battery?

The maximum average voltage of the three 100W solar panels in my testing is 27.07V at -40°F, which is not sufficient to charge a 24V battery. Below you'll find my charge controller recommendations when using 12V solar panels connected in series to charge 24V batteries.

Can a 50W solar panel charge a 12V battery?

For a 50W solar panel, a 10A charge controller with a 30V minimum solar input is ideal for charging a 12V battery. Most 10A MPPT controllers are rated for much higher than 30V, so using one capable of 75-100V is typical. A 100W solar panel typically needs a 10A charge controller with a 30V minimum solar input to work with 12V batteries.
