

South America s solar container energy storage system peak load regulation and frequency regulation

Overview

Do flexible resources support multi-timescale regulation of power systems?

Here, we focused on this subject while conducting our research. The multi-timescale regulation capability of the power system (peak and frequency regulation, etc.) is supported by flexible resources, whose capacity requirements depend on renewable energy sources and load power uncertainty characteristics.

What is the demand power for frequency regulation of Es?

The demand power for frequency regulation of ES for the four penetration scenarios is 203 MW, 290 MW, 483 MW, and 702 MW at 90% of the confidence level, which is equivalent to 1.68%, 2.22%, 3.41%, and 4.53% of the total installed system capacity respectively.

What is the power and capacity of Es peaking demand?

Taking the 49.5% RE penetration system as an example, the power and capacity of the ES peaking demand at a 90% confidence level are 1358 MW and 4122 MWh, respectively, while the power and capacity of the ES frequency regulation demand are 478 MW and 47 MWh, respectively.

What challenges does ESS face in power system frequency regulation?

However, ESS also faces challenges in power system frequency regulation. Firstly, the cost issue is an important consideration, especially in FR applications that require high discharge duration, where the cost of the technology remains high compared to conventional generation resources.
