

South Asia exports energy storage equipment

Overview

Why are China's Solar Exports reducing?

As more markets continue to adopt local content requirements (LCRs), China will start to face increasing constraints for solar exports. In response to growing LCRs, Chinese players are globalising manufacturing capacity to offset a loss in exports. Energy storage investors expand overseas footprint.

Why are China's energy storage products so important?

Our insights reveal that Chinese manufacturers are likely to maintain their export advantage on energy storage products due to their high productivity and low costs. Elsewhere, factories outside of China still face various long construction cycles, slow production capacity ramp up, and unverified product quality.

Where do Chinese storage companies invest?

Europe, the US, and Southeast Asia are among the top markets for Chinese manufacturing investment. Consequently, Chinese storage investors and manufacturers have grown their overseas footprint to 22 countries.

How are South Asia's electricity grids separated?

South Asia's electricity grids of India, Bhutan, Bangladesh, Nepal, and Sri Lanka are separated by limited physical interconnections and separate governing structures. While India, Bhutan, Nepal, and Bangladesh are physically interconnected, the degree to which they trade electricity is limited.
