

Special inverter for solar generator

Overview

What is a solar generator inverter?

This type of inverter is typically used in larger solar power systems where it's more cost-effective to install a single, centralized unit instead of installing individual microinverters or power optimizers for each panel. The right inverter can make or break your solar generator.

Is an inverter necessary for a solar generator?

An inverter is good for a solar generator as it can help the generator last longer during power outages. The inverter gets its power from the generator instead of the solar battery, allowing you to use the solar battery to power your load at night when there is no sun.

How do I choose a solar generator inverter?

The right inverter can make or break your solar generator. Whether you opt for a string, microinverter, or power optimizer will depend on your unique needs and situation. Be sure to know what you're looking for when shopping for an inverter; consider factors such as efficiency, size, ease of installation, and compatibility with other components.

Can a solar inverter power a home?

Without a solar inverter, you wouldn't be able to use those solar panels to power your home. A solar inverter's job is simple: It converts the direct current -- the electricity generated by your solar panels -- into alternating current electricity that your appliances run on.
