

Tallinn solar Panels BESS

Overview

The BESS is built using CATL LFP cells, offering a 92% round-trip efficiency and an expected lifetime of 10–15 years with 6,000–8,000 cycles. How much money has Estonia provided for energy storage projects?

A state agency in Estonia has provided €5.2 million (US\$5.7 million) in grants for 10 energy storage projects, including a 4MW/8MWh battery storage project from utility Eesti Energia. The state-funded Environmental Investment Centre announced the grant funding for the ten projects being developed by six companies today (28 June).

How many energy companies are there in Estonia?

The six companies are Utilitas Tallinn, Utilitas Estonia, Sunly Solar, Prategli Invest, Five Wind Energy, and Eesti Energia, and three out of the ten are heat storage projects, with the remainder for storing electricity.

How will a battery energy storage park work in Estonia?

The battery energy storage park and its substation will be connected to the electricity transmission network using a 330kV AC underground cable, marking a first in Estonia. Baltic Storage Platform confirmed that the BESS will seek to ensure the stability and resilience of the Estonian electricity grid.

What is the Baltic storage platform (Bess)?

Baltic Storage Platform confirmed that the BESS will seek to ensure the stability and resilience of the Estonian electricity grid. This will also extend to the Baltic power grids—Latvia, Lithuania, and Estonia—as they are anticipated to be disconnected from the Russian power grid and synchronised to the European grid by 2025.
