

Tariffs on bifacial solar modules in Cuba

Overview

Are bifacial solar panels exempt from tariffs?

Bifacial solar panels, which are predominantly used in commercial, industrial, and utility-scale solar power projects, were previously exempt from tariffs. With the removal of this exemption, the cost of imported bifacial solar panels, typically ranging from \$0.10-0.25 per watt, will increase by \$0.015 to \$0.0375 per watt.

Did Biden put bifacial solar panels back under Sec 201 tariffs?

The Biden Administration today put imported bifacial solar panels back under Sec. 201 tariffs, after the specialty solar panels enjoyed a two-year exemption from extra duties first initiated by President Biden in 2022.

Will bifacial solar panels lose exemption?

In addition to bifacial panels losing their exemption, the Biden Administration said it will raise the tariff-rate quota (TRQ) of silicon solar cells by 7.5 GW, if needed.

Why are bifacial panels exempt from tariffs?

Bifacial panels were originally exempt from the tariffs because there was no significant domestic manufacturing capacity of the specialty product. This caused more bifacial modules to be imported into the United States than monofacial panels, undermining the objectives of the original safeguard measure.
