

# Tehran off-grid power frequency 50kw inverter

## Overview

---

What is an off grid solar power system?

Off grid solar power system doesn't connect to the power grid. In general, it includes solar panels, charger controller, batteries and inverter. This system will store the solar power into the batteries, batteries energy will be converted the electricity power to supply the appliances working through the inverter.

What is an on grid solar power system?

On grid solar power system connects to the power grid. In general, it includes solar panels, grid-connected inverter, the solar power will be converted the electricity power to appliance working directly. When the solar power is off, the power grid will replenish the electricity power to appliances working.

How long does a solar inverter last?

No battery storage system, pure sine wave AC output, wide input voltage can be set according to customers' requirement. Powerful protection functions make its service life up to 15-20 years or more. These solar inverters provide a reliable source of power in areas without access to the grid or as a backup power supply.

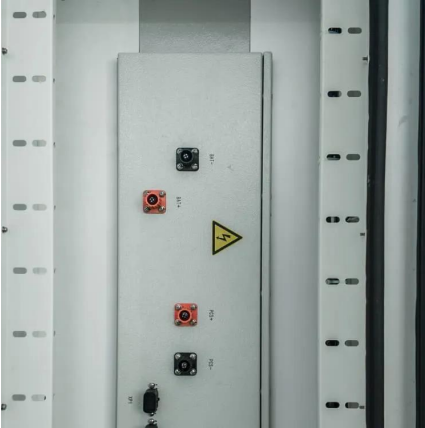

How many types of off grid solar systems are there?

There are 2 types of off grid solar systems. Mode 1: When there is no national grid, the off grid system will convert the DC power into AC for the loads operation independently.
