## Overview

---

Do solar panels need more batteries?

If you're already generating large amounts of energy from your solar array with the majority being sent to the grid, more batteries will help your own energy efficiency and reduce your personal energy waste. Solar panels have a longer lifespan (25-30 years) compared to batteries (10-15 years).

What are batteries and solar panels in a solar energy system?

Before we dive into the specifics, let's first understand the roles of batteries and solar panels in a solar energy system. Solar panels, also known as photovoltaic (PV) panels, capture sunlight and convert it into electricity. They are the primary components responsible for generating solar power.

Why should I add more batteries to my solar energy system?

They are the primary components responsible for generating solar power. On the other hand, batteries store excess solar energy generated by the panels for later use, ensuring a continuous power supply even when the sun is not shining. Adding more batteries to your solar energy system offers several advantages.

Should I add more solar panels to my battery?

If you have a large battery but are not filling it up regularly with solar energy, adding more PV panels is more advisable to maximise the battery's potential. This means you'll be making the most of your battery's storage capacity and not relying too heavily on the grid to charge it.
