

# **The cost of monocrystalline silicon solar panels**

## Overview

---

What is the difference between monocrystalline and polycrystalline solar panels?

Monocrystalline solar panels cost 0.90–1.20 per watt , offering 18–22% efficiency due to pure silicon, while polycrystalline panels are cheaper at 0.70–1.00 per watt but less efficient ( 15–17% ). Monocrystalline lasts 25–30 years with 0.3–0.5% annual degradation, whereas polycrystalline degrades 0.5–0.8% yearly.

How much does a monocrystalline solar & battery system cost?

A 4.5kWp monocrystalline solar & battery system usually costs around £11,307, including the price of installation. This should get you 10 solar panels, each with a 450-watt peak power rating, as well as a 5kWh battery.

How efficient are monocrystalline solar panels?

Monocrystalline solar panels are usually 20-25% efficient. are around 10-20% efficient. This means that monocrystalline panels can convert more daylight into electricity for your household and the grid than other types of panels, per square metre.

Is a monocrystalline solar panel a photovoltaic module?

Yes, a monocrystalline solar panel is a photovoltaic module. Photovoltaic (PV) modules are made from semiconducting materials that convert sunlight into electrical energy. Monocrystalline solar panels are a type of photovoltaic module that use a single crystal high purity silicon cell to harness solar power.
