The difference between UPS and batteries

Overview

Which UPS battery do I Need?

If you are not sure which battery you need, contact the UPS manufacturer for guidance. A VRLA (Valve Regulated Lead Acid) battery is a type of rechargeable battery commonly used in uninterruptible power supplies (UPS) and renewable energy storage.

Why do you need an UPS battery?

UPS batteries provide just enough juice to act as a safety net for your data and hardware. With emergency benefits ranging from a few seconds to a couple of minutes of extra power. In a power outage, a UPS acts as a backup battery system protecting your equipment as well as your data.

What is a UPS battery & how does it work?

The Battery – This is the heart of any UPS system; the batteries are how you store the power that you need to use when the power is disrupted. The batteries involved are stored in long ‘strings’ with several connected in series for continuous power.

Difference Between Ups and Battery Backups
How to Make A Choice on Ups and Battery Backup
UPS has more advanced technology than the traditional battery backup. It can sometimes be difficult to tell a "true" UPS because some manufacturers will label a battery backup system as a UPS even if it doesn't have a switching system. An uninterrupted power supply powers devices plugged in the UPS directly at the battery. The power charges the battery. See more on [hcienergy](#) [minghongpower](#)
