

UPS uninterruptible power supply can be customized

Overview

What is an uninterruptible power system (UPS)?

Uninterruptible power system (UPS) (1) An electrical system designed to provide instant, transient-free backup power during power failure or fault. Some UPSs also filter and/or regulate utility power (line conditioning). (2) A Device whose sole purpose is to save your equipment, your data and your job. User replaceable.

Why are uninterruptible power supplies important?

In times of increasing relevance of decentral power supplies and decreasing reliability of the power supply networks, uninterruptible power supplies (UPS) become more and more important.

What is an industrial UPS system?

Industrial UPS systems are either single or three phase output. The System can be fully customized according to the customer's requirements Is a three-phase output industrial UPS. A true "on-line" double conversion UPS system designed with the most advanced electronic technology equipped with microprocessor control.

Do you need an ups?

Recommendations for improved reliability In traditional power designs, you may have one UPS supporting your servers, switches and storage devices. In this type of environment, you are prone to having to shut down your equipment during a power failure, UPS maintenance or UPS replacement.
