

UPS uninterruptible power supply equipment in Mozambique computer room

Overview

What is uninterruptible power supply (UPS)?

For instance, when designing server rooms, they require uninterruptible power supply (UPS) systems that deliver complete power protection for critical IT applications. These components must also be able to accommodate growth and expansion while maintaining cost-effective performance.

Does your ups system work if your primary supply goes down?

Our UPS systems integrate seamlessly into data centers to deliver consistent, efficient power, even if your primary supply goes down. As technology advances, so does the demand for uninterrupted power. While there have been great advancements in the power grid, there are still vulnerabilities that allow for outages and fluctuations in flow.

What is a Mitsubishi Electric uninterruptible power supply?

Mitsubishi Electric Uninterruptible Power Supplies are designed to protect and secure customer data 24/7/365. Uninterruptible power supply systems are a core component of mission-critical data center infrastructures. At Mitsubishi Electric, we understand the risks associated with downtime in data centers – both to your finances and your reputation.

What is an UPS system & how does it work?

UPS systems are widely used in offices, server rooms, and data centers to protect critical equipment from power outages and electrical anomalies. These units employ various power delivery methods, and selecting the optimal approach depends on the specific application and required power quality standards.
