Uninterruptible power supply installation in the power distribution cabinet

Overview

What is a Powerware 9315 uninterruptible power supply (UPS)?

This Page Intentionally Left Blank. The Powerware 9315 Uninterruptible Power Supply (UPS) continually monitors incoming electrical power and removes the surges, spikes, sags, and other irregularities that are inherent in commercial utility power.

What is an uninterruptible power supply?

Uninterruptible power supplies are a fundamental part of the critical infrastructure and power circuits within a server room or data centre. As with any installation, it is important to map out and plan the power connections to ensure that there are enough connections and the right level of protection in place for the IT loads.

What is an uninterruptible power system (UPS)?

Uninterruptible power system (UPS) (1) An electrical system designed to provide instant, transient- free backup power during power failure or fault. Some UPSs also filter and/or regulate utility power (line conditioning). (2) A Device whose sole purpose is to save your equipment, your data and your job. User replaceable.

How do I isolate a redundant UPS module in Powerware 9315?

Place the UPS module to be isolated in Bypass mode. Place the redundant module in Bypass mode. Open the designated MOB of the UPS module to be isolated. When a module's designated MOB is open, it will work like a standard Reverse Transfer module as described in the Powerware 9315 Operation manual provided with the UPS system.
