

Uninterruptible power supply n1

Overview

What is an Uninterruptible Power Supply (UPS)?

An Uninterruptible Power Supply (UPS) can supply voltage long enough for you to shut all your equipment down in the event of a power failure or power line down in a storm. It is better to shut off equipment normally than to have it suddenly lose power.

What is N1c power & service without parallel?

Power and Service Without Parallel. The first to master the use of Lithium-Ion in the UPS space, N1C is here to lead your organization into the future of uninterruptible power. Our systems provide five times the energy than lead-acid in one-third the space. That's more power where you need it and longer backup times for your critical loads.

Is N1c a good UPS system?

" N1C's new lithium-battery-based UPS system is a game changer. A comparable price to similar units and removing the need to swap batteries for up to 10 years makes buying these systems a no-brainer. " We received the UPS without any issues and have since put it in service. It is running flawlessly.
