

Ups uninterruptible power supply equipment uninterruptible power supply equipment selection

Overview

What is an uninterruptible power supply (UPS)?

Uninterruptible Power Supply (UPS) | Schneider Electric Hong Kong, China. An Uninterruptible Power Supply system provides emergency power when the main source fails, using batteries to ensure a continuous supply. It conditions incoming power, protecting equipment from fluctuations. We offer various UPS power supply types for different needs.

How does a ups protect a device from sudden power failure?

An uninterruptible power supply (UPS) protects valuable devices from sudden power failures by providing backup power during power outages. This ensures a steady power supply to connected devices.

How does a UPS work?

A UPS works by detecting power failures or fluctuations and instantly switching to battery power. It converts AC power into DC power to charge its batteries and then back into AC for connected devices. When electricity is restored, it recharges the batteries.

Why should you use UPS management software?

It protects servers, storage systems, networking equipment from power quality issues. UPS management software enhances UPS functionality and efficiency, providing centralized control, monitoring, and automation for proactive power management. What are the benefits of using Uninterruptible Power Supply (UPS)?
