Overview

Can a combination box be installed near a solar array?

Combiner boxes are designed for installation near the PV array with each series string of solar modules connected to one of the fused/breaker circuits. The solar array input strings may be combined, yet only a single pair of wires is required between the Combiner Box and the PV controller location.

Can solar array input strings be combined?

The solar array input strings may be combined, yet only a single pair of wires is required between the Combiner Box and the PV controller location. This can result in a considerable savings in the cost of wire since fewer wires will have to be installed.

What is the smallest combiner box?

The smallest combiner box is offered by Midnite Solar MNPV3 which can accommodate up to 3 input circuits. To determine the size of the combiner box calculate the number of series strings in your array, this may be determined by the maximum open circuit voltage of your charge controller.
