# Use UPS battery cabinet

## Overview

---

What does a battery cabinet power?

Battery cabinets are designed to hold batteries used to power an uninterruptible power supply (UPS) system. In the event of a power disruption or outage, the UPS system ensures that your devices continue to operate from the energy stored in the batteries in the battery cabinet.

How do I set up an UPS battery room?

Open-rack battery rooms must be adjacent to the UPS room. Battery cabinets must be adjacent to the UPS equipment. Cable lengths from multiple cabinets should be kept as nearly identical as possible to prevent voltage drop variations. One cabinet should be able to hold at least one complete string of cells.

Are ups and battery cabinets dangerous?

The UPS and/or battery cabinets might be configured to look like standard computer equipment racks. There are two primary hazards of concern: electrical and fire. Open rack batteries expose potentially lethal voltage to any person coming in contact with them.

What is the battery capacity of the UPS system?

The UPS system uses batteries in the battery cabinet to provide power during disruptions. The battery capacity is 34.6 kWh. The system is lithium-ion based and can support up to 5 MW in parallel.
