

Using IGBT to produce sine wave inverter

Overview

How to design a pure sine wave inverter?

To design a pure sine wave inverter from the scratch, we require the following circuit stages: A basic 50 Hz or 60 Hz inverter circuit. An op amp comparator using IC 741 or by configuring IC 555. Two sets of triangle waveform, one slow (low frequency) and the other fast (high frequency).

What is a sine wave inverter?

A sine wave inverter is a device which converts battery power into a 220 V AC or a 120 V AC sine wave output. There are 3 basic types of inverters: square wave inverter, modified sine wave inverter and a pure sine wave inverter. The voltage waveform output from a square wave inverter is square wave.

Can a sine wave inverter produce a square wave output?

Some of them produce a square-wave output, which is undesirable for inductive loads. Here we designed a simple sine wave inverter circuit that produces 50Hz quasi-sine wave output using a single IC CD4047 and some discrete components, which makes it a very cost-effective solution. The DIY sine wave inverter circuit using IC 4047 is given below.

What is a modified inverter?

The voltage waveform output from a modified inverter is optimized to produce a modified square wave which is closer to a sine wave but not a pure sine wave. These inverters can be used to operate some selected home appliances or electronic gadgets, not all.
