## Overview

---

Who makes voltage regulators?

When it comes to voltage regulation, Siemens Energy provides technology that serves the customer. Our manufacturing experience for voltage regulators and controls is unsurpassed in the industry. Today, Siemens Energy has the largest quantity of regulators installed worldwide. The type JFR has been an industry leader since 1936.

How much adjustment does a voltage regulator provide?

The standard voltage regulator provides approximately 10% adjustment. However, in some designs, regulations of 15% and 20% are also available. Available at 50 or 60 Hz, their ratings are calculated according to the voltage level of the transformer they are connected to (i.e., 10%).

What is a 55°C rise regulator?

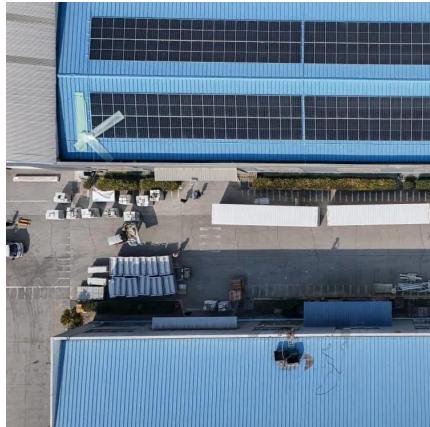

The Siemens 55°C rise regulators can be loaded to up to 12 percent above nameplate rating, with the 65°C insulation system. External metal-oxide varistor (MOV) bypass arrester provides superior protection to the regulator series winding from surge and system transients.

Who invented voltage regulator?

Siemens Energy invented the voltage regulator in 1932. Voltage regulators are highly reliable solutions for stabilizing voltage fluctuations in the customer's grid 24/7. They are notably more cost-effective for customers compared to other options. Voltage regulators come in 1-phase or 3-phase models. Different cooling systems are available.
