

Wall-mounted solar panels must be lower than the container

Overview

Can solar panels be mounted on a wall?

Roof-mounted solar panels are usually titled at a 20-50 degree angle, which allows them to capture sunlight when the sun is high in the sky. But most wall-mounted panels are parallel to the wall, or only slightly tilted. It's also harder to fit as many solar panels on a wall as you would on a roof.

Are wall-mounted solar panels a good alternative to roof-mounted panels?

Wall-mounted solar panels offer an alternative to roof-mounted panels and have benefits such as reducing carbon footprints and lowering electricity bills. Proper installation is crucial for wall-mounted panels, requiring strategic placement and special mounting hardware to maximise energy absorption.

Do I need planning permission to install wall-mounted solar panels?

You won't typically need planning permission to install wall-mounted solar panels on a property that you own. Properties that do require planning permission are listed buildings or buildings in conservation areas, where there are restrictions on the number of changes you can make to the outside of the property.

Do wall-mounted solar panels produce more energy in the winter?

Most of the time, the wall-mounted solar panel system will produce more energy during the winter. In the summer, they won't generate electricity as much. This is because, during the winter months, the sun is at its lowest. More direct sunlight will be hitting the tilted solar panel angles.
