

# What brand of solar container outdoor power is good to buy

## Overview

---

What is the best high wattage solar panel?

For maximum potential, I think EcoFlow's 400W panel is the best high-wattage option that still feels genuinely portable. The EcoFlow 400W can churn out plenty of power, and it does so in a surprisingly mobile package, though its 35-pound weight is a bit hefty and cumbersome to move and set up.

Are portable solar panels more mobile?

Some portable solar panels are more mobile than others. The panels that can produce the amount of electricity that you need to power many devices and/or appliances are generally quite large—at least a few feet across and a foot or two high: A larger panel allows you to absorb more energy.

Are portable power stations a good choice for solar panels?

With the growth of portable power stations as solar generators in the last decade, interest and competition has led to huge improvements in solar panel performance. When I began playing around with them back in the late '90s, they were little more than a novelty, with low wattage that limited their utility.

Which solar generator should I Choose?

If your solar generator needs to provide a steady stream of power for a hungry campsite or home, you'll need to go with larger, high-wattage panels that can absorb enough energy to keep the lights on. For maximum potential, I think EcoFlow's 400W panel is the best high-wattage option that still feels genuinely portable.
