

# **What is the supercapacitor in the solar container communication station in Port Louis**

## Overview

---

Can a supercapacitor be used during lay time in Port?

The transformers for the supercapacitor system are to be in accordance with 4-8-3/7 of the Marine Vessel Rules. Unless instructed otherwise by the flag Administration, the supercapacitor system may be used during lay time in port for supplying power to the vessel standalone or with other onboard power sources.

Are supercapacitors a viable alternative to battery energy storage?

Supercapacitors, in particular, show promise as a means to balance the demand for power and the fluctuations in charging within solar energy systems. Supercapacitors have been introduced as replacements for battery energy storage in PV systems to overcome the limitations associated with batteries [79, , , , , ].

Are supercapacitors suitable for pulse power applications?

Supercapacitors are ideally suited for pulse power applications, due to the fact the energy storage is not a chemical reaction, the charge/discharge behavior of the supercapacitor is efficient. Supercapacitors are utilized as temporary energy sources in many applications where immediate power availability may be interrupted.

Are supercapacitor power applications in public transportation sustainable?

Moreover, the increasing adoption of HESS and pure supercapacitor power applications in public transportation, such as buses, ferries, trams et al., demonstrates a safe, sustainable, and feasible energy utilization approach aligned with global environmentally-friendly development strategies.
