

# What size are the rooftop solar panels

## Overview

---

How many solar panels can fit on a roof?

To determine how many solar panels can fit on your roof, you'll first need to know the size of a solar panel. There's no standardized chart for this, but as an example, a 5kW solar system consists of 50 100-watt solar panels.

What are the dimensions of standard solar panels?

Most solar panels are about 1.5 inches thick. The typical classification of solar panel sizes is based on the solar cell size, but it's not very useful for most calculations.

Which solar panels are best for a roof?

Here's a quick guide to help you decide: **Small Roofs:** For smaller roofs, 60-cell panels are usually the best option. They offer a good balance of size and power output without overwhelming your roof. **Medium Roofs:** If you have a medium-sized roof, 72-cell panels could be a better fit.

How much do solar panels weigh on a roof?

Residential solar panels typically weigh 40-46 pounds each. The complete system adds about 3-4 pounds per square foot to your roof's load. Can my roof support solar panels?
