What to do if there is a problem with the uninterrupted power supply of the solar container communication station

Overview

What are common power supply problems & solutions?

Understanding power supply common problems and solutions ensures your equipment operates reliably. Common power supply problems include power failure, voltage inconsistencies, and overheating, often resulting from issues like faulty wiring, electromagnetic interference, or inadequate surge protection.

Why do you need an uninterruptible power supply (UPS)?

Whether it's a sudden blackout or subtle voltage fluctuations, power issues can damage sensitive equipment, disrupt productivity, and lead to significant financial losses. Fortunately, an Uninterruptible Power Supply (UPS) can act as a safeguard against these problems.

What should I do if my ups can't start without power supply?

If the battery fuse is complete, please check if the power detection circuit works normally. If it doesn't work normally while UPS can't start without power supply, UPS will also close all outputs and display. If the power detection circuit works normally, please check if the battery voltage test circuit is normal.

What should I do if my ups doesn't use batteries?

Get a professional to check and replace it. Check the wiring. When utility power is available, your UPS unit should not use batteries! If you noticed that it uses batteries when it shouldn't, make sure UPS is being supplied with power and check circuit breakers as well.
